EXPERIMENT NO. 11 – FLOWCHART TO FIND THE LENGTH OF A STRING USING RAPTOR

AIM

To draw and execute a flowchart in RAPTOR that reads a string, calculates the total number of characters and displays the length.

PROCEDURE

1. Open RAPTOR and create a new flowchart.
2. Insert an Input symbol to read the string into the variable str.
3. Insert an Assignment symbol and enter length ← Length_Of(str).
4. Insert an Output symbol and enter PUT length.
5. Connect the symbols from Start to End in sequence.
6. Run the flowchart, enter a sample string and verify the displayed length.

OUTPUT

Input: SoftwareEngineering

Output: Total Number of Characters = 19
